Budtello

FOR DISPENSARY OWNERS AND MANAGERS

AI is a great talker and a bad counter.

Why it gets store numbers wrong, and how Budtello fixes it.

What AI is good at

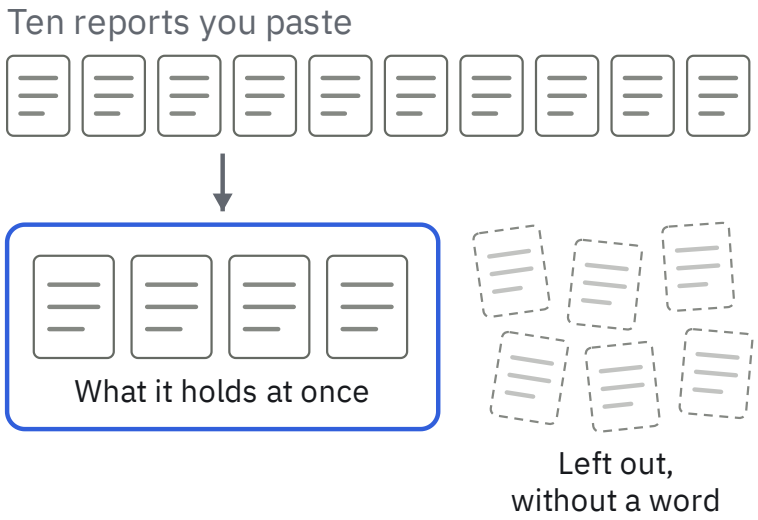
- ✓ Explaining what a number means.
- ✓ Writing: a note to staff, a summary for the owner.
- ✓ Answering in plain words, any time.

WHERE IT GOES WRONG · 1 AND 2 OF 4

Paste store reports into AI, and four things go wrong

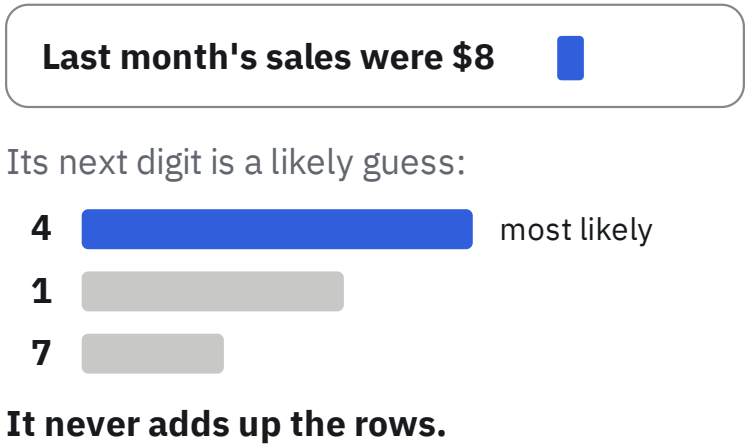
1. It can only hold so much

Paste ten reports and it drops parts without telling you.



2. It predicts. It doesn’t count.

It writes a total that sounds right. Ask twice, get two.



It never adds up the rows.

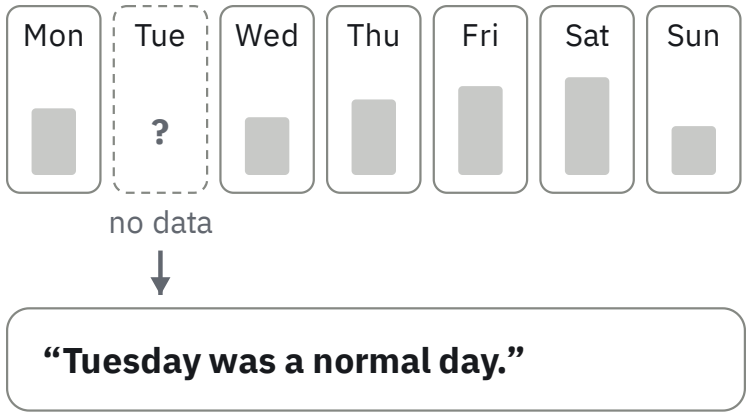
Budtello

WHERE IT GOES WRONG · 3 AND 4 OF 4

Paste store reports into AI, and four things go wrong

3. It fills gaps

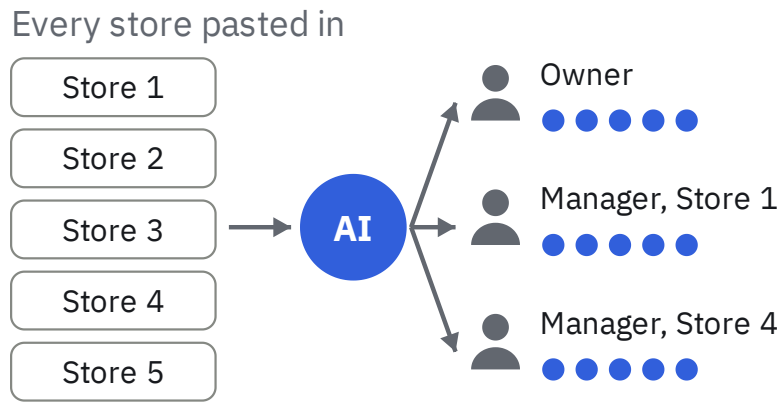
Missing a day or a store, it guesses instead of saying so.



It fills the gap instead of saying
“I don’t know.”

4. It has no boundaries

Paste every store, and anyone who asks sees every store.



Each person can see all five stores.

Budtello

THE FIX

A program counts. The AI talks.

A program counts

every row,
the same way,
every time.

→

The AI talks

the exact figure,
in plain words.

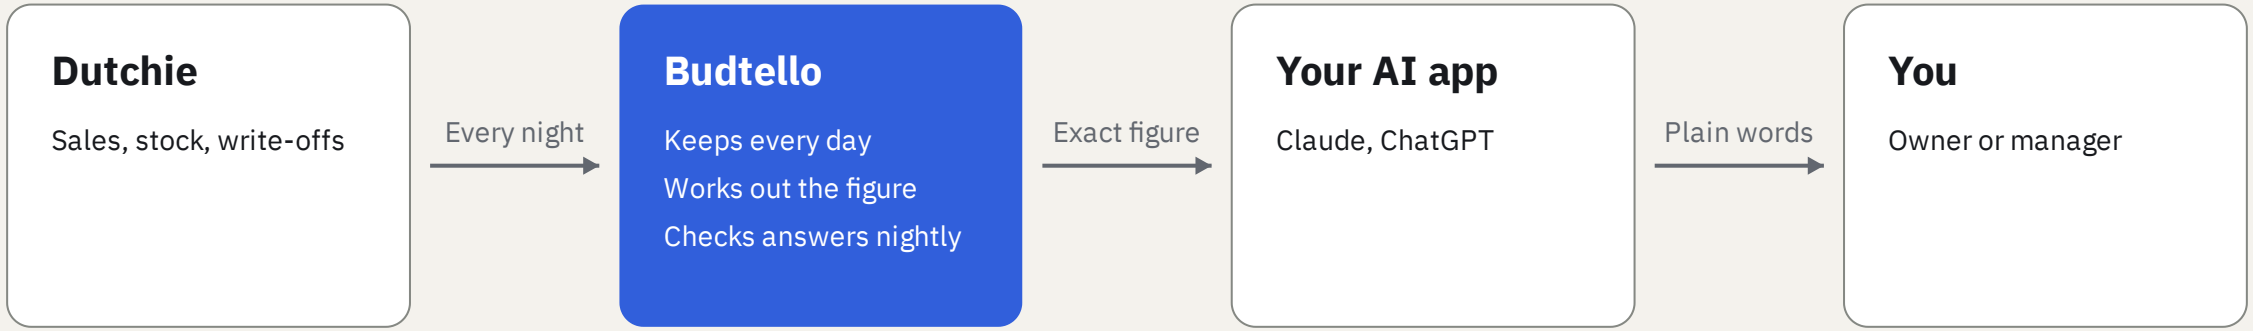
- ✓ A fixed program adds up the rows: every row, the same way, every time.
- ✓ The AI asks the program for the figure, then explains it.
- ✓ This is how AI is set up wherever the numbers have to be right.

None of this changes your Dutchie data. The data stays right; the answers about it go wrong.

Budtello

HOW BUDTELLO WORKS

Dutchie every night, the exact figure, in plain words.



Budtello only reads your Dutchie. It never sends anything back, so nothing in Dutchie changes.

Budtello

WHAT YOU GET

What owners and managers get

- A figure from your own data, not a new guess each time you ask.
- History: this year against last, same days, same stores.
- Each person sees only their stores. The owner decides who sees which.
- Owners, and managers for their own stores: write-offs by person, each compared with the others at the same store.
- Questions in plain words. No reports to paste.

Five questions to ask any AI tool for store numbers

1. Does it keep every day’s history?
2. Can it compare this year with last, on the same days and the same stores?
3. Can it put one person’s write-offs next to the others at the same store?
4. Who decides which stores each person sees?
5. Who checks its answers?

Budtello

PROOF

Every night, Budtello checks its answers.

1

Every night we check real answers.

2

An answer that doesn’t match your data gets caught.

3

A wrong answer is flagged and fixed.

In use at a five-store Oregon chain.

Budtello

GETTING STARTED

How to start

1

We connect your Dutchie.

Write to info@budtello.com and we set it up with you.

2

Add Budtello to your AI app.

Once, on a computer. Claude is recommended; ChatGPT, Gemini and Grok work too.

budtello.com/connect

3

Ask.

The Ask your AI guide shows what to ask, and how to ask it well.
